

# Snowblade

Part # SBLD

## Features

### Stainless Steel Mold Board

- "Trip" Feature
- Shock Absorbers
- Side to Side Tip/Oscillation
- Hydraulic Angle
- Moldboard height: 32"
- 30° Angle
- Optional Snow Plow Shoes

## More Features

- Reversible Bolt On Cutting Edge
- Variety of Widths: 5',6',7',8',9',10'
- Steps
- Powder Painted Black Frame
- MPUF-3 Mount
- Optional Rubber Edge (1 1/2" thick & 10" wide)

**HOSES & COUPLER KIT SOLD SEPARATELY  
SEE PG 958 FOR MORE INFORMATION**

Berlon's **Snowblade** is ideal for anyone's snowplowing needs. The blade is made out of stainless steel which prevents rusting due to scratch and wear. The **Snowblade** has a "trip" feature which, in the case of an operator accidentally hitting large objects such as rocks, the blade will tip and go over the object. The shock absorbers eliminate the blade from snapping back when it trips. The **Snowblade** has a side to side tip/oscillation for plowing on uneven surfaces. Besides being able to tip side to side, the **Snowblade** has a hydraulic angle allowing the operator to push snow to either side of the skidloader. The reversible bolt on cutting edge found on the **Snowblade** is made out of 3/4" x 8" steel. A rubber edge is also available. The optional snow plow shoes reduce wear on the cutting edge and minimize gravel removal while plowing. **With all these features it is easy to see that the Berlon Snowblade is ideal for anyone on the, farm, jobsite or even at home!**

Optional Rubber Edge
